**CUSTOMER NOTICE OF WATER USE RESTRICTIONS OF  
MACBEE SPECIAL UTILITY DISTRICT  
PWS ID: 2340012  
DROUGHT CONTINGENCY & EMERGENCY WATER DEMAND  
MANAGEMENT PLAN**

DATE: **August 13, 2024**

TO: Customers of MacBee Special Utility District- Lake System Only  
**(All pressure planes except for the JACKSON WELL SYSTEM)**

FROM: Management and Board of Directors

Due to extreme water usage during the past weeks, our system is unable to meet the demand of all water needs. Therefore, under our Drought Contingency and Emergency Water Demand Management Plan on file with the Texas Commission on Environmental Quality, **Stage 1** allocations will begin on **August 13, 2024** and will be in effect until the situation improves.

**Stage 1 Allocation restricts your water use as follows:**

- Limited and/or restrict any outside watering between 10:00 PM until 7:00 AM, all days of the week, but especially weekends, which are high-peak demand times. Soaker hoses and hand-held hoses may be used only.
- Turn off automatic sprinkler systems.
- No filling of swimming pools.

The Board has authorized those penalties and measures contained in the District's Service Policy that may be levied against you and placed on your account(s) if you are found violating this allocation. Subsequent violations may result in temporary termination of service. If you feel you have good cause for a variance from this water use restrictions program, please contact us in writing at the address above. A complete copy of our approved Drought Contingency and Emergency Water Demand Management Plan is available for review at our business office. A copy may be viewed at [www.macbeewater.com](http://www.macbeewater.com) under the Drought Contingency tab.

\*\*\* The Jackson Well System is not under any restriction at this time\*\*\*

Thank you for your cooperation.
